DEFINITIONS

Gender: The public (and usually legally recognized) lived role as boy or girl, man or woman. Biological factors are seen as contributing in interaction with social and psychological factors to gender development.

Gender assignment: The initial assignment as male or female, which usually occurs at birth and is subsequently referred to as the “natal gender.”

Gender dysphoria: Distress that accompanies the incongruence between one’s experienced and expressed gender and one’s assigned or natal gender.

Gender experience: The unique and personal ways in which individuals experience their gender in the context of the gender roles provided by their societies.

Gender expression: The specific ways in which individuals enact gender roles provided in their societies.

Gender identity: A category of social identity that refers to an individual’s identification as male, female or, occasionally, some other category other than male or female.

Gender reassignment: A change of gender that can be either medical (hormones, surgery) or legal (government recognition), or both. In case of medical interventions, often referred to as sex reassignment. (DSM-5)

Sex reassignment surgery (gender affirmation surgery, gender confirmation surgery): Surgery to change primary and/or secondary sex characteristics to affirm a person’s gender identity. Sex reassignment surgery can be an important part of medically necessary treatment to alleviate gender dysphoria. (WPATH)

DESCRIPTION

According to the DSM-5, gender dysphoria refers to the distress that may accompany the incongruence between one’s experienced or expressed gender and one’s assigned gender. Although not all individuals will experience distress as a result of such incongruence, many are distressed if the desired physical interventions by means of hormones and/or surgery are not available. Treatment options include:

- Changes in gender expression and role
- Hormone therapy
- Surgery
- Psychotherapy
Surgery, particularly genital surgery, is often the last and most considered step in the treatment process for gender dysphoria. While many transsexual, transgender and gender-nonconforming individuals find comfort with their gender identity, role, and expression without surgery, for many others surgery is essential and medically necessary to alleviate their gender dysphoria. For the latter group, relief from gender dysphoria cannot be achieved without modification of their primary and/or secondary sex characteristics to establish greater congruence with their gender identity. (WPATH, 2012)

The following health plan benefits are available to enrolled faculty and staff experiencing the distress and impairment of Gender Dysphoria:

- Mental health coverage
- Pharmaceutical coverage (e.g., for hormone replacement therapy)
- Coverage for medical visits or laboratory services
- Coverage for reconstructive surgical procedures related to gender reassignment (see criteria below)
- Coverage of routine, chronic, or urgent non-transition services (e.g., for a transgender individual based on their native sex or gender. For example, pelvic/gynecological exams for men with a transgender history.)

Please refer to the Ohio State University Faculty and Staff Health Plans Specific Plan Details Document for benefit coverage details.

**POLICY**

The coverage for health care expenses related to gender dysphoria will be covered at the same percentage as for any other diagnosis. There is no separate annual or lifetime maximum coverage amount and no separate deductible.

Psychotherapy (individual, couple, family, or group) is considered medically necessary for the diagnosis of gender dysphoria.

Hormone therapy is obtained through the pharmacy benefit. Please contact Express Scripts for specific details.

Gender confirmation surgery is considered medically necessary to change primary and/or secondary sex characteristics, when the specific criteria are met:

- Male-to-Female (MtF):
  - Breast/Chest Surgery: Augmentation mammoplasty
    - A. One referral from a qualified mental health professional documenting persistent gender dysphoria (see appendix); and
    - B. Individual has the capacity to make a fully informed decision and to consent for treatment; and
    - C. Age of majority (18 years of age or older); and
    - D. If significant medical or mental health concerns are present, they must be reasonably well controlled; and
    - E. A minimum of 12 continuous months of feminizing hormone therapy prior to breast augmentation surgery, since the individual may achieve adequate breast development without surgery.
Genital Surgery

A. Gonadectomy: Orchiectomy

A. Two referrals from qualified mental health professionals who have independently assessed the patient are needed. If the first referral is from the patient’s psychotherapist, the second referral should be from a person who has only had an evaluative role with the patient. Two separate letters, or one letter signed by both (e.g., if practicing within the same clinic) may be sent. Each referral letter, however, is expected to cover the same topics in the areas outlined below (see appendix); and

B. Persistent, well-documented gender dysphoria (see appendix); and

C. Capacity to make a fully informed decision and to consent for treatment; and

D. Age of majority (18 years of age or older); and

E. If significant medical or mental health concerns are present, they must be well controlled; and

F. 12 continuous months of hormone therapy as appropriate to the patient’s gender goals (unless hormones are not clinically indicated for the individual).

B. Genital Reconstructive Surgery: Penectomy, vaginoplasty, clitoroplasty, labiaplasty

A. Must meet criteria A – F for MtF gonadectomy; and

B. Twelve continuous months of living in a gender role that is congruent with their gender identity (real life experience).

The aim of hormone therapy prior to gonadectomy is primarily to introduce a period of reversible estrogen or testosterone suppression, before the patient undergoes irreversible surgical intervention.

These criteria do not apply to patients who are having these procedures for medical indications other than gender dysphoria.

• Female-to-Male (FtM):

  o Breast/Chest Surgery: Mastectomy, Nipple Reconstruction

A. One referral from a qualified mental health professional (see appendix); and

B. Persistent, well-documented gender dysphoria (see appendix); and

C. Individual has the capacity to make a fully informed decision and to consent for treatment; and

D. Age of majority (18 years of age or older); and

E. If significant medical or mental health concerns are present, they must be reasonably well controlled.

Hormone therapy is not a prerequisite.
Genital Surgery

A. Gonadectomy: Hysterectomy, salpingo-oophorectomy
   A. Two referrals from qualified mental health professionals who have independently assessed the patient are needed. If the first referral is from the patient’s psychotherapist, the second referral should be from a person who has only had an evaluative role with the patient. Two separate letters, or one letter signed by both (e.g., if practicing within the same clinic) may be sent. Each referral letter, however, is expected to cover the same topics in the areas outlined below (see appendix); and
   B. Persistent, well-documented gender dysphoria (see appendix); and
   C. Capacity to make a fully informed decision and to consent for treatment; and
   D. Age of majority (18 years of age or older); and
   E. If significant medical or mental health concerns are present, they must be well controlled; and
   F. 12 continuous months of hormone therapy as appropriate to the patient’s gender goals (unless hormones are not clinically indicated for the individual).

B. Genital Reconstructive Surgery: Vaginectomy, metoidioplasty, scrotoplasty, urethroplasty, placement of testicular prostheses, phalloplasty
   A. Must meet criteria A – F for FtM gonadectomy; and
   B. Twelve continuous months of living in a gender role that is congruent with their gender identity (real life experience).

The aim of hormone therapy prior to gonadectomy is primarily to introduce a period of reversible estrogen or testosterone suppression, before the patient undergoes irreversible surgical intervention.

These criteria do not apply to patients who are having these procedures for medical indications other than gender dysphoria.

EXCLUSIONS

Bioidentical and Compounded Hormones
To date, there is no scientific evidence that bioidentical hormones, whether prepared by a compounding pharmacy or pharmaceutical company, are safer to use than other forms of hormone therapy. All forms of hormone therapy may have potential risks, whether compounded or pharmaceutical, bioidentical or not. Therefore, bioidentical hormone replacement and compounded hormones are considered experimental and investigational.

Cosmetic
The following procedures, when used specifically to improve the gender specific appearance of an individual undergoing or planning gender reassignment surgery, are considered cosmetic and therefore not medically necessary (not an all-inclusive list):

- Abdominoplasty
- Blepharoplasty (unless criteria are met in MCG’s Ambulatory Care Guideline A-0195)
- Breast reduction (unless criteria are met in MCG’s Ambulatory Care Guideline A-0274)
• Brow lift  
• Calf implants  
• Cheek implants  
• Chin/nose implants  
• Collagen injections  
• Drugs for hair loss or hair growth  
• Electrolysis  
• Face-lift  
• Facial bone reconstruction  
• Hair transplantation  
• Hair removal  
• Lip enhancement/reduction  
• Liposuction  
• Mastopexy  
• Neck tightening  
• Pectoral implants  
• Reduction thyroid chondroplasty  
• Removal of redundant skin  
• Rhinoplasty (unless criteria are met in MCG’s Ambulatory Care Guideline A-0184)  
• Skin resurfacing  
• Voice modification surgery

Fertility Preservation
Individuals who undergo genital gender reassignment surgery do not meet criteria for infertility services. Therefore, the following services are not covered (not an all-inclusive list):
• Sperm preservation in advance of hormone treatment or gender dysphoria surgery  
• Cryopreservation of fertilized embryos  
• Oocyte preservation  
• Surrogate parenting (plan exclusion)  
• Donor eggs  
• Donor sperm  
• Host uterus

Reversal and Revision
The OSU Health Plan does not cover reversal or revision of gender confirmation surgery.

Severe Psychiatric Disorders
When patients with gender dysphoria are also diagnosed with severe psychiatric disorders and impaired reality testing (e.g., psychotic episodes, bipolar disorder, dissociative identity disorder, borderline personality disorder), an effort must be made to improve these conditions with psychotropic
medications and/or psychotherapy before surgery is contemplated. Reevaluation by a mental health professional qualified to assess and manage psychotic conditions should be conducted prior to surgery, describing the patient’s mental status and readiness for surgery. It is preferable that this mental health professional be familiar with the patient. No surgery should be performed while a patient is actively psychotic. Medical records should be submitted documenting reevaluation.

APPENDIX

Format for referral letters from Qualified Health Professional:

The recommended content of the referral letters for surgery is as follows:

1. The client’s general identifying characteristics;
2. Results of the client’s psychosocial assessment, including any diagnoses;
3. The duration of the mental health professional’s relationship with the client, including the type of evaluation and therapy or counseling to date;
4. An explanation that the criteria for surgery have been met, and a brief description of the clinical rationale for supporting the patient’s request for surgery;
5. A statement about the fact that informed consent has been obtained from the patient;
6. A statement that the mental health professional is available for coordination of care and welcomes a phone call to establish this.

For providers working within a multidisciplinary specialty team, a letter may not be necessary; rather the assessment and recommendation can be documented in the patient’s chart.

Competency of Mental Health Professionals Working with Adults Who Present with Gender Dysphoria:

The following are recommended minimum credentials for mental health professionals who work with adults presenting with gender dysphoria:

1. A master’s degree or its equivalent in a clinical behavioral science field. This degree, or a more advanced one, should be granted by an institution accredited by the appropriate national or regional accrediting board. The mental health professional should have documented credentials from a relevant licensing board or equivalent for that country.
2. Competence in using the Diagnostic Statistical Manual of Mental Disorders and/or the International Classification of Diseases for diagnostic purposes.
3. Ability to recognize and diagnose coexisting mental health concerns and to distinguish these from gender dysphoria.
4. Documented supervised training and competence in psychotherapy or counseling.
6. Continuing education in the assessment and treatment of gender dysphoria. This may include attending relevant professional meetings, workshops, or seminars; obtaining supervision from a mental health professional with relevant experience; or participating in research related to gender nonconformity and gender dysphoria.

DSM-5 Diagnostic Criteria for Gender Dysphoria in Adolescents and Adults:

A. A marked incongruence between one’s experienced/expressed gender and assigned gender, of at least 6 months’ duration, as manifested by at least two of the following:
1. A marked incongruence between one’s experienced/expressed gender and primary and/or secondary sex characteristics (or in young adolescents, the anticipated secondary sex characteristics).

2. A strong desire to be rid of one’s primary and/or secondary sex characteristics because of a marked incongruence with one’s experienced/expressed gender (or in young adolescents, a desire to prevent the development of the anticipated secondary sex characteristics).

3. A strong desire for the primary and/or secondary sex characteristics of the other gender.

4. A strong desire to be of the other gender (or some alternative gender different from one’s assigned gender).

5. A strong desire to be treated as the other gender (or some alternative gender different from one’s assigned gender).

6. A strong conviction that one has the typical feelings and reactions of the other gender (or some alternative gender different from one’s assigned gender).

B. The condition is associated with clinically significant distress or impairment in social, occupational, or other important areas of functioning.

**PRIOR AUTHORIZATION INSTRUCTIONS**

Prior authorization is not required for outpatient psychotherapy. Refer to the Ohio State University Faculty and Staff Health Plans Specific Plan Details Document for coverage details.

Please contact Express Scripts regarding prior authorization requirements for hormone therapy.

All surgical interventions for gender dysphoria require prior authorization.

**CODES**

ICD-10 codes covered if selection criteria are met:

| F64 – F64.9 | Gender identity disorder |

CPT codes for gender confirmation surgery that are covered if selection criteria are met:

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>19301, 19303 – 19304</td>
<td>Mastectomy</td>
</tr>
